

PADE1027 EF BRITE COTTON WHITE

EF Brite Cotton White PADE1027 is a high opacity, creamy, medium to low gloss ink that can be used as an under base, stand alone, or highlight white on 100% cotton garments. Easy to print on manual or automatic presses. Brite Cotton White provides great fiber mat down and coverage, excellent printability, and a very soft hand. This ink is very easy to use and is a terrific choice for novice printers and as well as large printing plants.

Highlights

-  Medium to low gloss (increased mesh count will lessen gloss)
-  Can be printed over a Low bleed or Poly Blocker under base.
-  Matches EF Low Bleed Diamond White when a Low bleed is needed for an under base
-  Produces sharp, bright prints.
-  Excellent first time white for beginners.
-  Can be added 1:1 to Plasticharge additive DSPCHE907 to create a Plasticharge white. See Plasticharge PIB for directions on activating mixture.

Printing Tips

-  Use any direct emulsion or capillary film compatible with plastisol inks.
-  A soft pad on the printing pallet and minimal squeegee pressure will minimize penetration into the garment and enhance the final print.
-  Thicker deposits with lower pressure will result in excellent detail. To achieve this, make sure your stencil thickness is adequate(about the thickness of a standard business card.
-  Squeegee should be a medium hardness, pressure should be medium to low.
-  A 60/90/60 or 55/95/55 durometer squeegee produces the best results.

Compliance

-  Internationally compliant
-  Non-phthalate
